## **Topic: Alternative Design For Automatic Cutlery Sorting Machine**

**Team members:**

**Ms. Oraya Chaimongkol (Project Leader)**

**Mr. Sadayu Chinnukul**

**Ms. Natnicha Wisettaksin**

**Advisor Dr. Suchada Rianmora**

**Presentation Date: April, 30 2021**

# OBJECTIVE

To design and prototype a compact, UV-sanitizing cutlery sorting machine that:

- Enhances public confidence in cutlery hygiene.
- Automates the sorting of forks and spoons.
- Provides a safer, more efficient alternative to traditional cleaning methods.

“

HYGIENE

Alternative Design For  
Automatic Cutlery  
Sorting Machine

# PROBLEM STATEMENT “

## Problem Statement

Current methods for cleaning and sorting cutlery in cafeterias and restaurants are:

- Time-consuming.
- Inefficient for large-scale use.
- Lacking additional sanitization beyond traditional cleaning.

### Cleaning method

Cafeteria at department store

### Sorting spoon and fork

Cafeteria at Thammasat university

## Proposed Solution

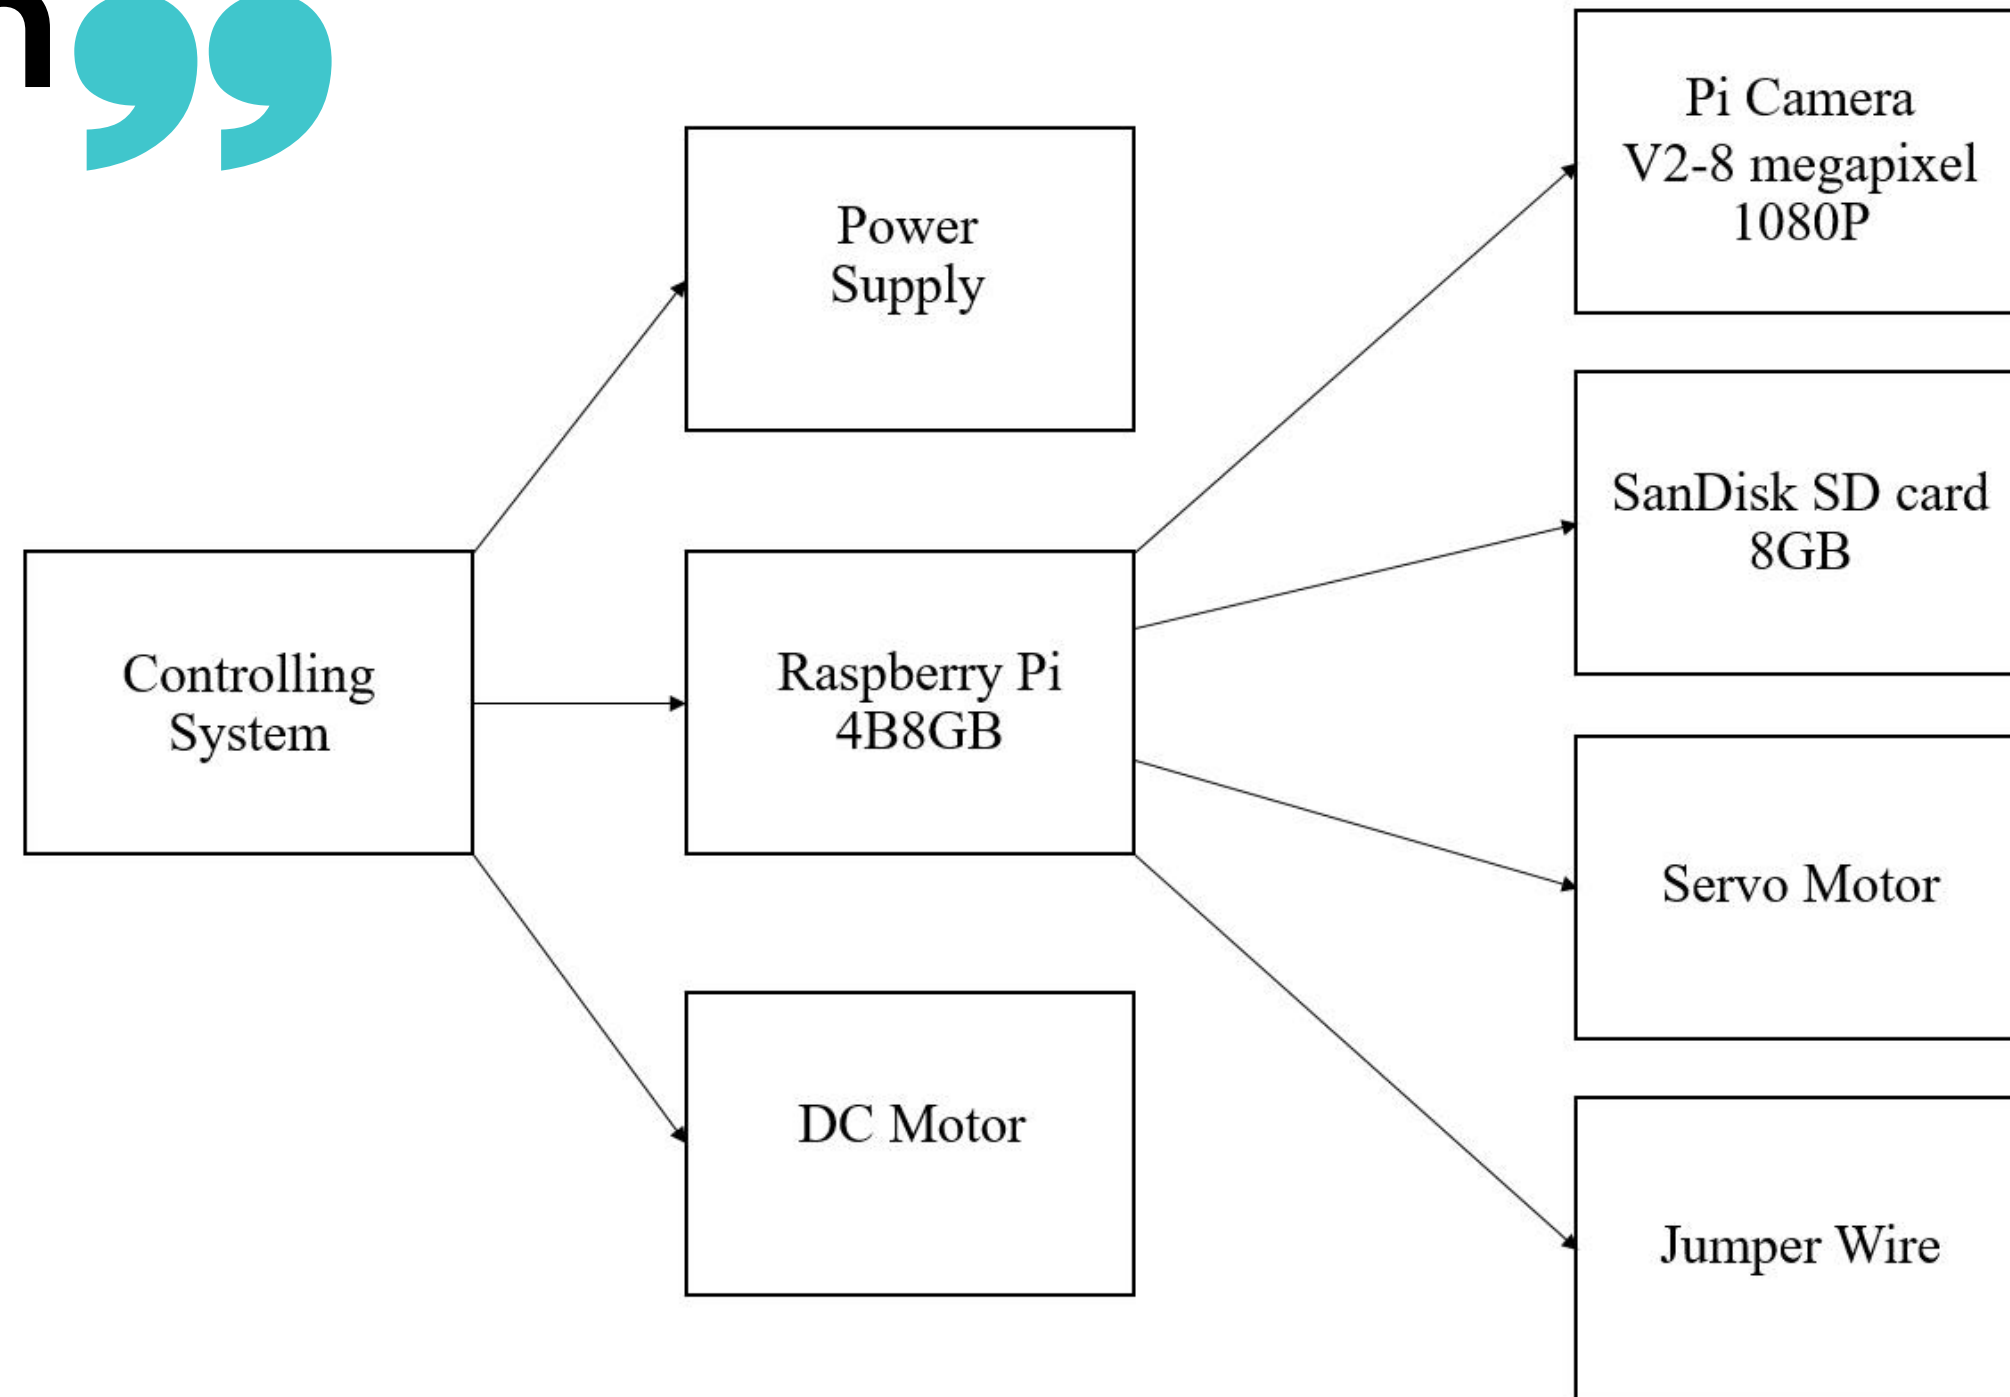

- Automate cutlery sorting and disinfection using UV-C technology.
- Design a compact, easy-to-use machine for cafeteria and restaurant settings.

## FORM

- Color - Light and bright color
- Shape - Universal design concept
- Size - Compatible size

## FIT

- Alignment
- Easy to access

## FUNCTION

- Cleaning
- Sorting
- Easy and ready to use
- Closed system
